Biodiversity Finance Innovation Alliance

Building The World's First Nature-Based Currency

The Financial Infrastructure That Makes Global Tropical Forests Worth More Standing

biofia.org · standingforests.org

◆ HISTORY

White paper published
May, 2025

First nature-based
currency white paper
centred on
forest protectors

Alliance Established
May, 2025

20+ allies building
the future of
biodiversity finance

Pilot in Development
June, 2026

Real interest from forest
protectors & investors

◆ ACT 1 — THE OPPORTUNITY

Destruction Is Financed. Protection Is **Not**.

Halting tropical deforestation takes an estimated **\$100–300B** a year.

Today, less than **\$2B** reaches forest protection.

Less than **1%** – only \$20M – of that reaches the local stewards who actually keep forests standing.

Today, a standing forest is economically invisible, valued only at the moment it's destroyed.

**This is not a capital shortage.
This is a **market infrastructure failure.****

◆ ACT 1 — THE OPPORTUNITY

Current Solutions Are **Limited.**

Individually, each solution doesn't work. What if we had a market mechanism to compound efforts?

Philanthropy

- Inconsistent, small-scale capital
- Favors large institutions
- Creates dependency, not sovereignty

Government Funding

- Slow & bureaucratic
- Prioritizes big NGOs
- Limited direct flow to protectors

Eco-Tourism

- Hard to scale
- Capital Intensive
- Not feasible everywhere

Carbon Credits

- Carbon priced, ecosystems ignored
- Additionality rules penalize long-term protectors
- Generic commodities, detached from local protectors

Biodiversity Credits

- Early-stage Market
- Capital intensive
- Corporate dependent demand

Bio-Economy

- Hard to scale
- Market access is a challenge
- Commodifying art & medicine

◆ ACT 1 — THE OPPORTUNITY

The Window Wasn't Open Five Years Ago. It Is Now.

The infrastructure to connect impact demand to forest protection on the ground still doesn't exist.
That's what we build.

Four things have converged that make the world's first **Nature-Based Currency** buildable today:

◆ **Natural-capital markets are emerging**

Nature is being recognized as economic and social infrastructure, not charity.

◆ **Institutional demand is real and unmet**

Buyers want credible, long-term, high-integrity ecological assets they currently can't source.

◆ **Digital MRV has matured**

Remote sensing, community led biodiversity monitoring, and distributed verification are finally good enough to underwrite trust at scale.

◆ **Tropical forest protection is the last cheap line of defence**

We can still fight against Climate Collapse. Protecting forests is our cheapest solution.

◆ ACT 2 — WHY IT MATTERS

We Need To Protect The **Last Billion Hectares.**

Integrating irreplaceable ecosystem protection into financial markets to finance their protection.

<1B ha

of primary tropical forest remain.

Finite. Scarce. Irreplaceable.

Tropical primary forests regulate the climate, hold most of the planet's terrestrial biodiversity, and stabilize the conditions that make life possible.

BioFIA builds the financial infrastructure to **invest in protecting nature. Not just donate to it.**

We turn the standing condition of a forest into an asset class, routing value to protectors instead of extractors.

THE POWER SHIFT:

from grants that run out, to a market that compounds.

 ACT 2 — WHY IT MATTERS

DEMOCRATIZING CONSERVATION

**Today, if you love the living world,
your main option is to donate.
Those who can't, grieve.**

Participate with Investment

Invest, stake, and support at any level.
Value flows to protectors. Tokens
appreciate as more backers join.

Watch your contribution live

A global map shows the forests
you back, their health, and the
protectors you support.

Turn grief into agency

A direct, traceable line to the
forests you care about and the
people keeping them standing.

 ACT 2 — WHY IT MATTERS

**We envision an economy
where nature,
and those who protect it,
are the foundation of value.**

Ecosystems are recognized as living infrastructure: essential to global environmental, economic and geopolitical stability. We build the financial architecture that lets the value of protected nature compound over time, turning conservation from a cost into an asset that appreciates.

**This is how nature protection scales beyond philanthropy.
We are creating a path of participation for every person on the planet.**

◆ ACT 3 — THE MECHANISM

Not Another Company's Token. The World's First Nature-Based Currency.

THE OLD MODEL — CENTRALLY ISSUED

Central Issuer. Supply is managed by a central entity, eroding trust and leaving the door open to corruption.

No scarcity to drive demand. Projects have unlimited supply or arbitrary scarcity with nothing to back it.

Ex-ante verification. Selling promise of future performance often erodes trust.

Value flows through intermediaries. Money flows through intermediaries before arriving on the ground.

Dependent on the carbon market. Value is often tied to the volatility of the carbon market.

Commodifying Nature. Tokens represent land itself. Often ignoring the protectors on the ground.

DECENTRALIZED, LIKE BITCOIN

No central issuer. Tokens are minted by verified forest protectors – earned through real protection.

Scarcity is physical, not arbitrary. Supply is capped by the bio-physical reality of the >1B hectares that remain.

Verification first. Tokens mint only after historical protection and ecological integrity are confirmed.

Value never pools centrally. It flows directly to protectors and is governed under their control.

Market driven valuation. Carbon and all other ecosystem services are a node in the system – not the system itself.

Commodifying Protection. Tokens represent the historical protection of land. Empowering the protector.

ACT 3 — THE MECHANISM

We Price The Protection Of A Forest. Not The Land, Not Its Carbon.

Protection carries the value. The protector holds and issues it.
 Scarcity attracts investors. High integrity credit bundles attract impact buyers.

THE CURRENCY

Represents the historical protection of one hectare of primary tropical forest. Issued to the forest protector.

It trades on the open market. Needed to access the credit bundles. Each trade pays the protector a royalty. Forever.

- FUNGIBLE
- ISSUED ONCE
- ISSUED TO FOREST PROTECTOR

THE CREDIT BUNDLE

Each year a forest is verified standing, the protector mints a stacked credit bundle.

Carbon, Biodiversity, Water, Community. Even Bio-economy products and services and Bio-prospecting rights.

- NON-FUNGIBLE
- ISSUED ANNUALLY
- ISSUED TO FOREST PROTECTOR

◆ ACT 3 — THE MECHANISM

Once Protection Has A Price, Demand Compounds.

Four buyer profiles create a self-reinforcing loop: each source of demand lifts the value of what the others hold, drawing in more capital. It all converges with the forest protector; they earn first by supplying the market, then earn again, permanently, every time the asset trades.

◆ ACT 2 — THE MECHANISM

A Digital Ecosystem To Harness Value For Protectors

Protection becomes the asset

Capital enters directly. A protector. A location. A health score. Not a donation to a project. A position in a specific forest.

Supply is set by what's left standing. Under a billion hectares, falling by millions a year.

New units exist only when a protector proves protection. The token is mined by actively protecting the forest.

The protector is paid on day one, and paid again on every trade that follows, for as long as the forest stands.

Supply =
<1 Billion Hectares left.

◆ ACT 3 — THE MECHANISM

We're designing a living system. So we draw on the sciences of living systems.

Systems Thinking & Biomimicry

Leverage points, not brute force. We price the standing condition of a forest and design systems to distribute value the way healthy ecosystems do.

Complexity Science

Markets and forests are both complex adaptive systems. We design for feedback loops, emergence, and resilience, producing a system that self-organizes as it scales.

Ancestral Futures

The communities who have protected these forests for generations aren't stakeholders to consult. They are the intelligence layer of the system, carrying ancestral ways of knowing that have sustained these ecosystems across centuries and that guide where we go next.

Indigenous wisdom isn't a legacy to preserve but a living design principle for the world we're building.

Five Interlocking Systems. Best-In-Class Experts In Each Action Group.

 Digital Infrastructure Protocol, global map, token mechanics, staking, exchange/royalty rails. Bitcoin-level trust. Allies: ESRI PlanetaryX EternalLabs Earth Analytic + more	 Ecological & Traditional Scientific Integrity Verification science, digital MRV, forest-health scoring, Traditional Ecological Knowledge + remote sensing. ◆ ACT 4 — WHY US

This Is Already Moving.

4M hectares

forest-protector interest
real forests.
real stewards.
ready to onboard.

- ◆ **Anchor partners committed** — Fundación Maquipucuna (in-kind support), Puente Institute (fiscal sponsor), and a founding alliance already assembled.
- ◆ **First funder in** — a Rainforest Trust grant funded whitepaper and communication strategy.
- ◆ **Pilot pathway live** — soft agreements with forest protectors stewarding 4M ha of primary tropical forest in 14 countries. Pilot agreements in Ecuador established.
- ◆ **The thesis is written** — full whitepaper drafted and prototype is being developed.

We're not asking you to fund an idea.

We're inviting you to join the movement to redefine our economic system to one where nature is valued.

ACT 4 — WHY US

BioFIA: The Alliance Behind The Protocol.

FUNDING PARTNERS

◆ ACT 5 — THE PATH & THE ASK

\$5M activates a working pilot in 6 months and operational capacity for 24 months.

By month 24: a live protocol with 5M+ha of forests onboarded, 1000+ Forest Protector groups, \$10M in SFTs daily transaction volume, \$100M in impact and institutional capital invested, 5M AVTs issued and purchased, credit-market integration proven.

Technology

- Protocol
- Map-based platform
- Geospatial + land-title oracles
- Deforestation monitoring
- Social trust network
- Wallet
- WhatsApp onboarding
- Forest health scoring
- Credit integrations
- Fiat + exchange/royalty rails

Market Creation

- First buyers and demand activated
- \$50M impact bond structured
- \$100M in initial transactions closed
- Pricing and royalty flows tested in real conditions.

Global Convening

- Forest protectors
- Standards & integrity bodies
- Verifiers and investors brought into one design process
- First Forest Protector cohort onboarded.

Distributed Governance

- Interim BioFIA governance
- Verification partners accredited
- Forest Protector governance committee established
- Science committee established
- Decentralized governance pathway.

\$5M

for a two year runway

To build a new economy.

Finance for Finance.

We're not raising to fund conservation project-by-project.

We're deploying catalytic capital to build the financial infrastructure that lets conservation fund itself.

Manage millions

Mobilize billions

Anchor trillions in Nature

USA Tax deductible funding flows through
BioFIA's fiscal sponsor, Puente Institute

Global funding flows through Maquipucuna
Foundation

A close-up photograph of two green tree frogs resting on a large, vibrant green leaf. The frogs are positioned one above the other, with their large, dark eyes and translucent skin clearly visible. The background is dark, making the green of the frogs and the leaf stand out.

**We're building the conditions for capital
to flow into nature at planetary scale.**
